## Plexineon Highlights

### New Color Hits the San Diego Bay

The San Diego Bay skyline is picturesque in and of itself. Now it's even brighter and more visually interesting thanks to an added dash of color on the Allegro building. This high rise residential building has become quite an eye-catcher with double strips of red Plexineon, totaling 750 LF, running up "the fin."

The owner is so pleased with the look that he has since decided to add more vibrant Plexineon to outline the 10th floor pool deck.

**Architect:** Austin Veum Robbins Partners  
**Arch Rep:** O'Connor Sales of CA

### Lightfair 2005 Wrap Up

Becoming a regular in the New Product Showcase, iLight Technologies displayed color changing products at the show.

In addition to our popular Plexineon Color Series and unique White Series which does not use white LEDs, iLight also revealed a unique Cool Touch LED bollard with Fairweather ([www.fairweathersf.com](http://www.fairweathersf.com)) that is currently under development.

Fairweather selected iLight's technology because it runs cool. The release of the new Cool Touch LED lighted bollards is scheduled for June 2005 and will launch with many different options.

This product will be available to sell through the iLight rep system.

### Plexineon Highlights

#### [iLight Shines in Broadway's Hit "Spamalot"](#)

iLight's Plexineon has become quite a regular on Broadway. While not the starring role in *Monty Python's* extremely popular *Spamalot*, Plexineon is taking a supporting role in providing the stage set with three shining white crosses.

Plexineon Cross on castle

These days, Plexineon is such a Broadway star because of its low voltage personality and durable nature. It also gives set designers peace of mind that their actors won't be around dangerous and breakable products while on their path to finding the Holy Grail.

**Designer:** Chicago Scenic Studios

**Distributor:** Barbizon

### Toyota Center Photos

Last month, we covered Plexineon at the Toyota Center but didn't have images.

The words, "Toyota Center" and the Toyota logo on the roof of the building are outlined by 3800 LF of Plexineon.
