

Creative Hospitality Application

Color can help create the perfect ambiance. Ray's on the River Restaurant is more than a romantic evening on the banks of the Chattahoochee. Artistic Blue Plexineon custom concave accents behind the portals inspires a feeling of floating down the riverscape. The designer also selected straight lengths of Amber Plexineon to give their award-winning wine a warm, golden glow. The overall palate of colored lighting makes this restaurant an inviting, unique dining experience. Bon appetite!

Hypnotica iS Color Changing Series is Here

Introducing Hypnotica. Color mixing meets motion in a mesmerizing, new sleek fixture from iLight. With a discrete profile and unmatched evenness in tone, Hypnotica can create environments that range from soothing and relaxing to dramatic and stunning. This virtually limitless system can be used to give buildings that signature look, add colorful mood lighting in coves, or create the perfect atmosphere.

For product demonstrations, please contact us at info@ilight-tech.com.

White 1X & White 2X

One of the most universal of our colors, White Plexineon, works in almost all applications. iLight's assortment of white colors and intensities provides freedom to create the look you want. For more subtle white to use in cove or direct view, White 1X offers three temperatures - 3500K, 4500K, 6500K.

For more dramatic effects or higher light environments, our White 2X Series offers 50% brighter light output, making it a perfect choice. It is offered in 3500K, 4500K, or 6500K, with an exciting addition of the warm 2800K.

All whites come in straight standard lengths or custom factory bent to fit any project.
