### iLight's Best of 2009 Awards

Every lighting manufacturer secretly knows that their products, while innovative and creative, are mere tools for designers to help enhance their project visions. On some projects, these lighting tools may only highlight a key architectural detail, and in others, the lighting may be the main design itself.

From painting the skyline with striking lines of light to creating a gentle flow of colors, designers use [iLight's LED products](#) because they help deliver that "right" ambiance, or give a building that signature look.

For "The Best of 2009," iLight would like to recognize the following projects and designers for exemplary application of iLight's LED lighting systems to enhance their designs. May these projects inspire you during your next design phase or awaken new design solutions in the upcoming year.
