

Daring Lines of White Decorate Striking Singapore Building

Mapletree Anson isn't just any ordinary office building in Singapore's Central Business District. This building has been designed to be eco-friendly with energy-efficient cooling plants, condensation recycling, and an exterior accent lighting system, [Plexineon White Series](#), with striking visual impact and low power draw.

Mapletree Anson is the proud winner of the Building and Construction Authority (BCA) "Green Mark" for Buildings Platinum Award.

Making Connections: The Capital City State Trail Overpass

Bridges do more than provide a passage way over barriers. They connect; they join -- both symbolically as well as physically. A growing Midwestern city called Fitchburg, located in Wisconsin, needed such a connection.

Fitchburg city officials wanted a gateway structure to their city, a means to connect local and regional trails and paths, and a way to solve safety and congestion issues with its major bicycle and pedestrian trail known as the Capital City State Trail.

Making Connections: The Capital City State Trail Overpass Cont.

AECOM, a global provider of professional technical services was brought in to help the city. AECOM selected iLight's Plexineon White 1X Series - 4500°K to use along the pedestrian railing to light the concrete deck without using overhead poles.

"The final outcome of this project far exceeds the normal pedestrian structure and sends a statement that bridges are unique," states James Lucht, PE and AECOM's Wisconsin Bridge Group Leader, Midwest Region. The connection between points, both physical and symbolic, is now complete.

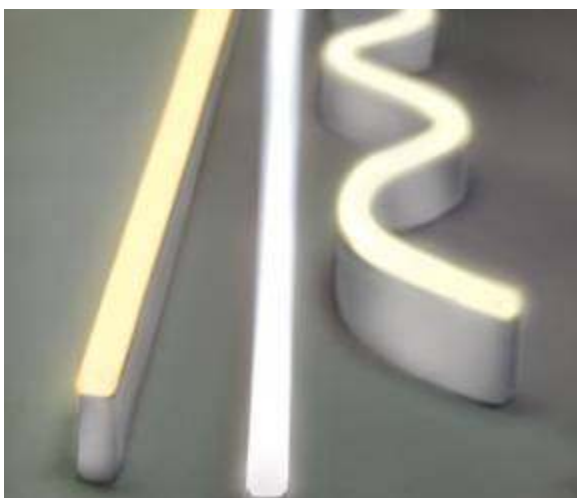

iCan Be [Insert Great Idea]

Be inspired and visit our [Gallery of Applications](#). More than just pretty pictures, see how designers have creatively applied our LED lighting systems in various diverse projects.

With iLight's variety of vibrant colors and temperatures of whites, coupled with any custom bend or length, designers have limitless application options.

Take a moment to [visit our Gallery](#) and peruse through the many application possibilities that iLight offers.

Versatile and Slim White Light

For a modern spin on direct view fluorescent-like lighting, a seamless solution for coves, or creative accent lighting for the vertical elements of a facade, [iLight's white LED lighting system](#) offers designers a versatile and smart white solution.

iLight's proprietary white light is achieved by using standard blue LEDs and a remote diffusing phosphor technology. The Plexineon White Series provides even illumination coupled with more stable color temperatures and longer lifetimes.
